

Business Analysis - RentSafeTO-evaluation-view.csv

Decision brief

Objective: How are Toronto rental apartment buildings scoring on RentSafeTO evaluations, which parts of the building are losing points, and what is likely to come next?

What happened

- Row volume changed by +66.4% in the latest year (2,044 rows) against the year before (1,228 rows). A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.369$. This did not clear the confidence gate because a gap this size could still be ordinary variation: watch it, do not act on it yet. [fact: measure.volume.change_pct, measure.volume.last12, measure.volume.prior12, measure.volume.change_pct.p]
- Average current_score moved from 89.6 in the year before to 90.2 in the latest year, a change of +0.655. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.021$. This did not clear the confidence gate because the gap is statistically clear, but the change is smaller than the size we require before recommending action: watch it, do not act on it yet. [fact: measure.current_score.change, measure.current_score.prior12_mean, measure.current_score.last12_mean, measure.current_score.change.p]
- Average entry_score moved from 94.8 in the year before to 94.8 in the latest year, a change of +0.030. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.922$. This did not clear the confidence gate because a gap this size could still be ordinary variation: watch it, do not act on it yet. [fact: measure.entry_score.change, measure.entry_score.prior12_mean, measure.entry_score.last12_mean, measure.entry_score.change.p]
- Average envelope_score moved from 86.2 in the year before to 85.9 in the latest year, a change of -0.212. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.638$. This did not clear the confidence gate because a gap this size could still be ordinary variation: watch it, do not act on it yet. [fact: measure.envelope_score.change, measure.envelope_score.prior12_mean, measure.envelope_score.last12_mean, measure.envelope_score.change.p]
- Average grounds_score moved from 88.4 in the year before to 89.6 in the latest year, a change of +1.191. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.001$. This did not clear the confidence gate because the gap is statistically clear, but the change is smaller than the size we require before recommending action: watch it, do not act on it yet. [fact: measure.grounds_score.change, measure.grounds_score.prior12_mean, measure.grounds_score.last12_mean, measure.grounds_score.change.p]
- Average interiors_score moved from 88.5 in the year before to 89.3 in the latest year, a change of +0.786. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.077$. This did not clear the confidence gate because a gap this size could still be ordinary variation: watch it, do not act on it yet. [fact: measure.interiors_score.change, measure.interiors_score.prior12_mean, measure.interiors_score.last12_mean, measure.interiors_score.change.p]
- Average paperwork_score moved from 90.3 in the year before to 92.6 in the latest year, a change of +2.285. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.0001$. This did not clear the confidence gate because the gap is statistically clear, but the change is smaller than the size we require before recommending action: watch it, do not act on it yet. [fact: measure.paperwork_score.change, measure.paperwork_score.prior12_mean, measure.paperwork_score.last12_mean, measure.paperwork_score.change.p]
- Average proactive_score moved from 89.7 in the year before to 90.4 in the latest year, a change of +0.770. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.006$. This did not clear the confidence gate because the gap is statistically clear, but the change is smaller than the size we require before recommending action: watch it, do not act on it yet. [fact: measure.proactive_score.change,

measure.proactive_score.prior12_mean, measure.proactive_score.last12_mean,
measure.proactive_score.change.p]

- Average refused_items moved from 0.164 in the year before to 0.167 in the latest year, a change of +0.002. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.970$. This did not clear the confidence gate because a gap this size could still be ordinary variation: watch it, do not act on it yet. [fact: measure.refused_items.change, measure.refused_items.prior12_mean, measure.refused_items.last12_mean, measure.refused_items.change.p]
- Average stairs_score moved from 85.6 in the year before to 87.6 in the latest year, a change of +1.973. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.0001$. This did not clear the confidence gate because the gap is statistically clear, but the change is smaller than the size we require before recommending action: watch it, do not act on it yet. [fact: measure.stairs_score.change, measure.stairs_score.prior12_mean, measure.stairs_score.last12_mean, measure.stairs_score.change.p]
- Average systems_score moved from 94.4 in the year before to 94.5 in the latest year, a change of +0.108. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.757$. This did not clear the confidence gate because a gap this size could still be ordinary variation: watch it, do not act on it yet. [fact: measure.systems_score.change, measure.systems_score.prior12_mean, measure.systems_score.last12_mean, measure.systems_score.change.p]
- Average waste_score moved from 92.2 in the year before to 93.4 in the latest year, a change of +1.249. A permutation test puts the chance of a gap this large arising from ordinary variation at $p = 0.001$. This did not clear the confidence gate because the gap is statistically clear, but the change is smaller than the size we require before recommending action: watch it, do not act on it yet. [fact: measure.waste_score.change, measure.waste_score.prior12_mean, measure.waste_score.last12_mean, measure.waste_score.change.p]
- The most common decade_built value is '1960s', with 33.3% of rows. [fact: measure.decade_built.share.1]
- The most common district value is 'Toronto and East York', with 39.7% of rows. [fact: measure.district.share.1]
- The most common property_type value is 'PRIVATE', with 84.3% of rows. [fact: measure.property_type.share.1]
- The most common storeys_band value is '3-4', with 51.1% of rows. [fact: measure.storeys_band.share.1]
- The most common ward_name value is 'Toronto-St. Paul's', with 9.7% of rows. [fact: measure.ward_name.share.1]
- Left out of every figure above: 366 rows dated after the analysis window (the last month in the file (2026-09) holds the analysis date 2026-09-23, so it is not over yet). [fact: measure.rows_after_end]

Why

Nothing in this data explains the changes above, and no outside context was attached. That is not the same as having no cause: the file records what happened, not why.

What's next

- A forecast of monthly rows in RentSafeTO-evaluation-view.csv was fitted but is not offered: it could only be checked against 7 replayed months of 39 months of history, too few to trust. [fact: forecast.monthly_rows.next, forecast.monthly_rows.backtest.months, forecast.monthly_rows.history.months]

What to do

Nothing in this analysis cleared the confidence gate, so it recommends no action. The changes above are things to watch, not to act on.

The evidence, finding by finding

Every figure above comes from one of the facts below; each is gated and re-run.

What changed

- Change in row volume, latest 12 months against the 12 before. Measured at 66.45%. Support: held across 5 periods, 3,272 rows scanned, effect size 0.66. Directional only, not yet actionable. [fact: measure.volume.change_pct]
- Change in average paperwork_score, latest 12 months against the 12 before. Measured at 2.29 paperwork_score. Support: held across 7 periods, 3,261 rows scanned, effect size 0.03. Directional only, not yet actionable. [fact: measure.paperwork_score.change]
- Change in average stairs_score, latest 12 months against the 12 before. Measured at 1.97 stairs_score. Support: held across 6 periods, 3,269 rows scanned, effect size 0.02. Directional only, not yet actionable. [fact: measure.stairs_score.change]
- Change in average refused_items, latest 12 months against the 12 before. Measured at 0 refused_items. Support: held across 4 periods, 3,272 rows scanned, effect size 0.01. Directional only, not yet actionable. [fact: measure.refused_items.change]
- Change in average waste_score, latest 12 months against the 12 before. Measured at 1.25 waste_score. Support: held across 5 periods, 3,269 rows scanned, effect size 0.01. Directional only, not yet actionable. [fact: measure.waste_score.change]
- Change in average grounds_score, latest 12 months against the 12 before. Measured at 1.19 grounds_score. Support: held across 6 periods, 3,272 rows scanned, effect size 0.01. Directional only, not yet actionable. [fact: measure.grounds_score.change]
- Change in average interiors_score, latest 12 months against the 12 before. Measured at 0.79 interiors_score. Support: held across 5 periods, 3,272 rows scanned, effect size 0.01. Directional only, not yet actionable. [fact: measure.interiors_score.change]
- Change in average proactive_score, latest 12 months against the 12 before. Measured at 0.77 proactive_score. Support: held across 5 periods, 3,272 rows scanned, effect size 0.01. Directional only, not yet actionable. [fact: measure.proactive_score.change]
- Change in average current_score, latest 12 months against the 12 before. Measured at 0.65 current_score. Support: held across 5 periods, 3,272 rows scanned, effect size 0.01. Directional only, not yet actionable. [fact: measure.current_score.change]
- Change in average envelope_score, latest 12 months against the 12 before. Measured at -0.21 envelope_score. Support: held across 4 periods, 3,272 rows scanned, effect size -0. Directional only, not yet actionable. [fact: measure.envelope_score.change]
- Change in average systems_score, latest 12 months against the 12 before. Measured at 0.11 systems_score. Support: held across 4 periods, 3,268 rows scanned, effect size 0. Directional only, not yet actionable. [fact: measure.systems_score.change]
- Change in average entry_score, latest 12 months against the 12 before. Measured at 0.03 entry_score. Support: held across 2 periods, 3,272 rows scanned, effect size 0. Directional only, not yet actionable. [fact: measure.entry_score.change]

What it means

- No finding in this run cleared the confidence gate, so this brief recommends no action.
- Change in row volume, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. A 66% difference across 3,272 rows, but a gap this size would still turn up by chance in about 37 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. Caveats: months treated as exchangeable in the test; each window holds every calendar month once, so seasonality is balanced. [fact: measure.volume.change_pct]
- Change in average paperwork_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. Solid enough to keep an eye on, not enough to act on: the difference is 2.5%

where we want at least 5% before changing anything. [fact: measure.paperwork_score.change]

- Change in average stairs_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. Solid enough to keep an eye on, not enough to act on: the difference is 2.3% where we want at least 5% before changing anything. [fact: measure.stairs_score.change]
- Change in average refused_items, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. A 1.4% difference across 3,272 rows, but a gap this size would still turn up by chance in about 97 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. [fact: measure.refused_items.change]
- Change in average waste_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. Solid enough to keep an eye on, not enough to act on: the difference is 1.3% where we want at least 5% before changing anything. [fact: measure.waste_score.change]
- Change in average grounds_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. Solid enough to keep an eye on, not enough to act on: the difference is 1.3% where we want at least 5% before changing anything. [fact: measure.grounds_score.change]
- Change in average interiors_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. A 0.8% difference across 3,272 rows, but a gap this size would still turn up by chance in about 8 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. [fact: measure.interiors_score.change]
- Change in average proactive_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. Solid enough to keep an eye on, not enough to act on: the difference is 0.8% where we want at least 5% before changing anything. [fact: measure.proactive_score.change]
- Change in average current_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. Solid enough to keep an eye on, not enough to act on: the difference is 0.7% where we want at least 5% before changing anything. [fact: measure.current_score.change]
- Change in average envelope_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. A 0.2% difference across 3,272 rows, but a gap this size would still turn up by chance in about 64 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. [fact: measure.envelope_score.change]
- Change in average systems_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. A 0.1% difference across 3,268 rows, but a gap this size would still turn up by chance in about 76 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. [fact: measure.systems_score.change]
- Change in average entry_score, latest 12 months against the 12 before. Did not clear the confidence gate; treated as a signal, not a finding. A 0% difference across 3,272 rows, but a gap this size would still turn up by chance in about 92 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. [fact: measure.entry_score.change]

What to do

No finding in this run cleared the confidence gate, so this brief recommends no action.

What we are watching

- Monitor: Change in row volume, latest 12 months against the 12 before. Currently 66.45%. Not yet actionable. Gate: A 66% difference across 3,272 rows, but a gap this size would still turn up by chance in about 37 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. Re-check when this is true: More of the same pattern: it has held for 5 periods so far, and another 2 periods at this size, or a pull wider than 3,272 rows, would separate a real difference from noise. [fact: measure.volume.change_pct]
- Monitor: Change in average paperwork_score, latest 12 months against the 12 before. Currently 2.29

paperwork_score. Not yet actionable. Gate: Solid enough to keep an eye on, not enough to act on: the difference is 2.5% where we want at least 5% before changing anything. Re-check when this is true: To turn this into a recommendation: the gap would have to widen to about 5%. [fact: measure.paperwork_score.change]

- Monitor: Change in average stairs_score, latest 12 months against the 12 before. Currently 1.97 stairs_score. Not yet actionable. Gate: Solid enough to keep an eye on, not enough to act on: the difference is 2.3% where we want at least 5% before changing anything. Re-check when this is true: To turn this into a recommendation: the gap would have to widen to about 5%. [fact: measure.stairs_score.change]
- Monitor: Change in average refused_items, latest 12 months against the 12 before. Currently 0 refused_items. Not yet actionable. Gate: A 1.4% difference across 3,272 rows, but a gap this size would still turn up by chance in about 97 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. Re-check when this is true: More of the same pattern: it has held for 4 periods so far, and another 2 periods at this size, or a pull wider than 3,272 rows, would separate a real difference from noise. [fact: measure.refused_items.change]
- Monitor: Change in average waste_score, latest 12 months against the 12 before. Currently 1.25 waste_score. Not yet actionable. Gate: Solid enough to keep an eye on, not enough to act on: the difference is 1.3% where we want at least 5% before changing anything. Re-check when this is true: To turn this into a recommendation: the gap would have to widen to about 5%. [fact: measure.waste_score.change]
- Monitor: Change in average grounds_score, latest 12 months against the 12 before. Currently 1.19 grounds_score. Not yet actionable. Gate: Solid enough to keep an eye on, not enough to act on: the difference is 1.3% where we want at least 5% before changing anything. Re-check when this is true: To turn this into a recommendation: the gap would have to widen to about 5%. [fact: measure.grounds_score.change]
- Monitor: Change in average interiors_score, latest 12 months against the 12 before. Currently 0.79 interiors_score. Not yet actionable. Gate: A 0.8% difference across 3,272 rows, but a gap this size would still turn up by chance in about 8 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. Re-check when this is true: More of the same pattern: it has held for 5 periods so far, and another 2 periods at this size, or a pull wider than 3,272 rows, would separate a real difference from noise. [fact: measure.interiors_score.change]
- Monitor: Change in average proactive_score, latest 12 months against the 12 before. Currently 0.77 proactive_score. Not yet actionable. Gate: Solid enough to keep an eye on, not enough to act on: the difference is 0.8% where we want at least 5% before changing anything. Re-check when this is true: To turn this into a recommendation: the gap would have to widen to about 5%. [fact: measure.proactive_score.change]
- Monitor: Change in average current_score, latest 12 months against the 12 before. Currently 0.65 current_score. Not yet actionable. Gate: Solid enough to keep an eye on, not enough to act on: the difference is 0.7% where we want at least 5% before changing anything. Re-check when this is true: To turn this into a recommendation: the gap would have to widen to about 5%. [fact: measure.current_score.change]
- Monitor: Change in average envelope_score, latest 12 months against the 12 before. Currently -0.21 envelope_score. Not yet actionable. Gate: A 0.2% difference across 3,272 rows, but a gap this size would still turn up by chance in about 64 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. Re-check when this is true: More of the same pattern: it has held for 4 periods so far, and another 2 periods at this size, or a pull wider than 3,272 rows, would separate a real difference from noise. [fact: measure.envelope_score.change]
- Monitor: Change in average systems_score, latest 12 months against the 12 before. Currently 0.11 systems_score. Not yet actionable. Gate: A 0.1% difference across 3,268 rows, but a gap this size would still turn up by chance in about 76 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. Re-check when this is true: More of the same pattern: it has held for 4 periods so far, and another 2 periods at this size, or a pull wider than 3,268 rows, would separate a real difference from noise. [fact: measure.systems_score.change]
- Monitor: Change in average entry_score, latest 12 months against the 12 before. Currently 0.03 entry_score. Not yet actionable. Gate: A 0% difference across 3,272 rows, but a gap this size would still turn up by chance in

about 92 of 100 similar datasets -- we only call something settled at 5 in 100 or better. Worth tracking, not worth acting on yet. Re-check when this is true: More of the same pattern: it has held for 2 periods so far, and another 2 periods at this size, or a pull wider than 3,272 rows, would separate a real difference from noise. [fact: measure.entry_score.change]

What we cannot answer

- The data cannot support this claim: Forecast of monthly rows in RentSafeTO-evaluation-view.csv for 2026-09. Why: The method could only be replayed over 7 months, fewer than the 12 we require to judge it. What would settle it: A longer history, so at least 12 months can be held out. [fact: forecast.monthly_rows.next]

About your file

Background measurements from the audit. They describe the file; they are not problems to act on.

- Cleaned rows in the business analysis of RentSafeTO-evaluation-view.csv [fact: measure.rows]
- Cleaned rows dated after 2026-08, left out of the monthly analysis [fact: measure.rows_after_end]
- Months covered by the analysis, 2023-06 to 2026-08 [fact: measure.months]
- Rows in the latest 12 months (2025-09 to 2026-08) [fact: measure.volume.last12]
- Rows in the 12 months before (2024-09 to 2025-08) [fact: measure.volume.prior12]
- Chance of a volume gap this large between the two 12-month windows if month-to-month variation were all there is (permutation test on monthly row counts) [fact: measure.volume.change_pct.p]
- Average proactive_score over 2023-06 to 2026-08 [fact: measure.proactive_score.mean]
- Median proactive_score over 2023-06 to 2026-08 [fact: measure.proactive_score.median]
- Average proactive_score in the latest 12 months [fact: measure.proactive_score.last12_mean]
- Average proactive_score in the 12 months before [fact: measure.proactive_score.prior12_mean]
- Chance of a gap this large in average proactive_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.proactive_score.change.p]
- Average current_score over 2023-06 to 2026-08 [fact: measure.current_score.mean]
- Median current_score over 2023-06 to 2026-08 [fact: measure.current_score.median]
- Average current_score in the latest 12 months [fact: measure.current_score.last12_mean]
- Average current_score in the 12 months before [fact: measure.current_score.prior12_mean]
- Chance of a gap this large in average current_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.current_score.change.p]
- Average envelope_score over 2023-06 to 2026-08 [fact: measure.envelope_score.mean]
- Median envelope_score over 2023-06 to 2026-08 [fact: measure.envelope_score.median]
- Average envelope_score in the latest 12 months [fact: measure.envelope_score.last12_mean]
- Average envelope_score in the 12 months before [fact: measure.envelope_score.prior12_mean]
- Chance of a gap this large in average envelope_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.envelope_score.change.p]
- Average grounds_score over 2023-06 to 2026-08 [fact: measure.grounds_score.mean]
- Median grounds_score over 2023-06 to 2026-08 [fact: measure.grounds_score.median]
- Average grounds_score in the latest 12 months [fact: measure.grounds_score.last12_mean]
- Average grounds_score in the 12 months before [fact: measure.grounds_score.prior12_mean]
- Chance of a gap this large in average grounds_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.grounds_score.change.p]
- Average entry_score over 2023-06 to 2026-08 [fact: measure.entry_score.mean]
- Median entry_score over 2023-06 to 2026-08 [fact: measure.entry_score.median]

- Average entry_score in the latest 12 months [fact: measure.entry_score.last12_mean]
- Average entry_score in the 12 months before [fact: measure.entry_score.prior12_mean]
- Chance of a gap this large in average entry_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.entry_score.change.p]
- Average systems_score over 2023-06 to 2026-08 [fact: measure.systems_score.mean]
- Median systems_score over 2023-06 to 2026-08 [fact: measure.systems_score.median]
- Average systems_score in the latest 12 months [fact: measure.systems_score.last12_mean]
- Average systems_score in the 12 months before [fact: measure.systems_score.prior12_mean]
- Chance of a gap this large in average systems_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.systems_score.change.p]
- Average stairs_score over 2023-06 to 2026-08 [fact: measure.stairs_score.mean]
- Median stairs_score over 2023-06 to 2026-08 [fact: measure.stairs_score.median]
- Average stairs_score in the latest 12 months [fact: measure.stairs_score.last12_mean]
- Average stairs_score in the 12 months before [fact: measure.stairs_score.prior12_mean]
- Chance of a gap this large in average stairs_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.stairs_score.change.p]
- Average interiors_score over 2023-06 to 2026-08 [fact: measure.interiors_score.mean]
- Median interiors_score over 2023-06 to 2026-08 [fact: measure.interiors_score.median]
- Average interiors_score in the latest 12 months [fact: measure.interiors_score.last12_mean]
- Average interiors_score in the 12 months before [fact: measure.interiors_score.prior12_mean]
- Chance of a gap this large in average interiors_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.interiors_score.change.p]
- Average waste_score over 2023-06 to 2026-08 [fact: measure.waste_score.mean]
- Median waste_score over 2023-06 to 2026-08 [fact: measure.waste_score.median]
- Average waste_score in the latest 12 months [fact: measure.waste_score.last12_mean]
- Average waste_score in the 12 months before [fact: measure.waste_score.prior12_mean]
- Chance of a gap this large in average waste_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.waste_score.change.p]
- Average paperwork_score over 2023-06 to 2026-08 [fact: measure.paperwork_score.mean]
- Median paperwork_score over 2023-06 to 2026-08 [fact: measure.paperwork_score.median]
- Average paperwork_score in the latest 12 months [fact: measure.paperwork_score.last12_mean]
- Average paperwork_score in the 12 months before [fact: measure.paperwork_score.prior12_mean]
- Chance of a gap this large in average paperwork_score between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.paperwork_score.change.p]
- Average refused_items over 2023-06 to 2026-08 [fact: measure.refused_items.mean]
- Median refused_items over 2023-06 to 2026-08 [fact: measure.refused_items.median]
- Average refused_items in the latest 12 months [fact: measure.refused_items.last12_mean]
- Average refused_items in the 12 months before [fact: measure.refused_items.prior12_mean]
- Chance of a gap this large in average refused_items between the two 12-month windows if the windows did not differ (permutation test on every row) [fact: measure.refused_items.change.p]
- Share of rows where ward_name is 'Toronto-St. Paul's' (rank 1 by rows), 2023-06 to 2026-08 [fact: measure.ward_name.share.1]
- Share of rows where ward_name is 'Etobicoke-Lakeshore' (rank 2 by rows), 2023-06 to 2026-08 [fact: measure.ward_name.share.2]
- Share of rows where ward_name is 'York South-Weston' (rank 3 by rows), 2023-06 to 2026-08 [fact:

measure.ward_name.share.3]

- Share of rows where ward_name is 'Eglinton-Lawrence' (rank 4 by rows), 2023-06 to 2026-08 [fact: measure.ward_name.share.4]
- Share of rows where ward_name is 'York Centre' (rank 5 by rows), 2023-06 to 2026-08 [fact: measure.ward_name.share.5]
- Share of rows where district is 'Toronto and East York' (rank 1 by rows), 2023-06 to 2026-08 [fact: measure.district.share.1]
- Share of rows where district is 'North York' (rank 2 by rows), 2023-06 to 2026-08 [fact: measure.district.share.2]
- Share of rows where district is 'Etobicoke York' (rank 3 by rows), 2023-06 to 2026-08 [fact: measure.district.share.3]
- Share of rows where district is 'Scarborough' (rank 4 by rows), 2023-06 to 2026-08 [fact: measure.district.share.4]
- Share of rows where property_type is 'PRIVATE' (rank 1 by rows), 2023-06 to 2026-08 [fact: measure.property_type.share.1]
- Share of rows where property_type is 'TCHC' (rank 2 by rows), 2023-06 to 2026-08 [fact: measure.property_type.share.2]
- Share of rows where property_type is 'SOCIAL HOUSING' (rank 3 by rows), 2023-06 to 2026-08 [fact: measure.property_type.share.3]
- Share of rows where decade_built is '1960s' (rank 1 by rows), 2023-06 to 2026-08 [fact: measure.decade_built.share.1]
- Share of rows where decade_built is '1950s' (rank 2 by rows), 2023-06 to 2026-08 [fact: measure.decade_built.share.2]
- Share of rows where decade_built is '1970s' (rank 3 by rows), 2023-06 to 2026-08 [fact: measure.decade_built.share.3]
- Share of rows where decade_built is '1980s' (rank 4 by rows), 2023-06 to 2026-08 [fact: measure.decade_built.share.4]
- Share of rows where decade_built is '1920s' (rank 5 by rows), 2023-06 to 2026-08 [fact: measure.decade_built.share.5]
- Share of rows where storeys_band is '3-4' (rank 1 by rows), 2023-06 to 2026-08 [fact: measure.storeys_band.share.1]
- Share of rows where storeys_band is '5-9' (rank 2 by rows), 2023-06 to 2026-08 [fact: measure.storeys_band.share.2]
- Share of rows where storeys_band is '10-19' (rank 3 by rows), 2023-06 to 2026-08 [fact: measure.storeys_band.share.3]
- Share of rows where storeys_band is '20+' (rank 4 by rows), 2023-06 to 2026-08 [fact: measure.storeys_band.share.4]
- Low end of the 80% range for monthly rows in RentSafeTO-evaluation-view.csv in 2026-09 [fact: forecast.monthly_rows.next.lo80]
- High end of the 80% range for monthly rows in RentSafeTO-evaluation-view.csv in 2026-09 [fact: forecast.monthly_rows.next.hi80]
- Months replayed to choose and check the method (each forecast made from what was known at the time) [fact: forecast.monthly_rows.backtest.months]
- Months of history the forecast learned from [fact: forecast.monthly_rows.history.months]
- Average miss of the chosen method when the last 7 months were replayed, as a share of the actual value [fact: forecast.monthly_rows.backtest.mape]
- Average miss of the chosen method one month ahead, when the last 7 months were replayed [fact: forecast.monthly_rows.backtest.mape_h1]

- Error of the chosen method relative to the same-month-last-year rule's typical miss (MASE) [fact: forecast.monthly_rows.backtest.mase]
- Replay error (MASE) of the method: repeat last month's value [fact: forecast.monthly_rows.model.naive.mase]
- Replay average miss of the method: repeat last month's value [fact: forecast.monthly_rows.model.naive.mape]
- Replay error (MASE) of the method: repeat the same month from last year [fact: forecast.monthly_rows.model.seasonal_naive.mase]
- Replay average miss of the method: repeat the same month from last year [fact: forecast.monthly_rows.model.seasonal_naive.mape]
- Replay error (MASE) of the method: extend the straight line from the first month to the last [fact: forecast.monthly_rows.model.drift.mase]
- Replay average miss of the method: extend the straight line from the first month to the last [fact: forecast.monthly_rows.model.drift.mape]
- Replay error (MASE) of the method: a log-linear trend with month-of-year effects [fact: forecast.monthly_rows.model.loglinear_season.mase]
- Replay average miss of the method: a log-linear trend with month-of-year effects [fact: forecast.monthly_rows.model.loglinear_season.mape]
- Replayed months whose actual value fell inside the month-ahead 80% range [fact: forecast.monthly_rows.coverage.hits]
- Replayed months with a month-ahead 80% range built only from errors known at the time [fact: forecast.monthly_rows.coverage.n]
- Replayed forecasts at every horizon whose actual value fell inside the 80% range (overlapping checks) [fact: forecast.monthly_rows.coverage_all.hits]
- Replayed forecasts at every horizon with an 80% range built only from errors known at the time (overlapping checks) [fact: forecast.monthly_rows.coverage_all.n]

Evidence

Every number in this brief carries its unit and a fact id. 13 of 13 figures in this brief have a query that can be re-run against the source; of those, 13 reproduced when re-run. Evidence by id: measure.volume.change_pct [WATCH] 66.45%, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0.37; measure.paperwork_score.change [WATCH] 2.29 paperwork_score, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,261 rows scanned, data health 93.9 of 100, p 0; measure.stairs_score.change [WATCH] 1.97 stairs_score, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,269 rows scanned, data health 93.9 of 100, p 0; measure.refused_items.change [WATCH] 0 refused_items, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0.97; measure.waste_score.change [WATCH] 1.25 waste_score, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,269 rows scanned, data health 93.9 of 100, p 0; measure.grounds_score.change [WATCH] 1.19 grounds_score, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0; measure.interiors_score.change [WATCH] 0.79 interiors_score, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0.08; measure.proactive_score.change [WATCH] 0.77 proactive_score, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0.01; measure.current_score.change [WATCH] 0.65 current_score, re-run: reproduced, over RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0.02;

measure.envelope_score.change [WATCH] -0.21 envelope_score, re-run: reproduced, over
 RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0.64;
 measure.systems_score.change [WATCH] 0.11 systems_score, re-run: reproduced, over
 RentSafeTO-evaluation-view.csv, 3,268 rows scanned, data health 93.9 of 100, p 0.76;
 measure.entry_score.change [WATCH] 0.03 entry_score, re-run: reproduced, over
 RentSafeTO-evaluation-view.csv, 3,272 rows scanned, data health 93.9 of 100, p 0.92; forecast.monthly_rows.next
 [INSUFFICIENT] 934.27 rows, refit: reproduced, over RentSafeTO-evaluation-view.csv, 6,315 rows scanned, data
 health 93.9 of 100.
